## **Miniproject – 1: Shuttle Score [Individual]**

#### **Modules:**

- 1. C Programming
- 2. Git

### Requirements

#### Introduction

My proposed application named ShuttleScore calculates the points of each of the players of the shuttle badminton game with respective to the point they secure. It also displays the name of the players, set points and points scored in each of the sets.

#### Research

In the previous method, they have already done the shuttle score board. Now I am trying on my own method to display the shuttle badminton score.

#### **Cost and Features and Timeline**

It is developed to bring a new visual to the score board in a better way.

#### **Defining our system**

Instead of using the same visual or the same format, we can see something new in appearance.

#### **SWOT Analysis**

**Strength:** Very much useful in viewing the scoreboard in a new style.

Weakness: No additional information is displayed.

**Opportunity:** This will be helpful in knowing the points easily and appropriately. **Threat:** May be according to every individual it may not be liked by everyone.

#### 4W's and 1'H

**What:** The app that is made to view the shuttle scoreboard in a new style.

**Who:** It will be beneficial for the game viewers. **When:** To view the score in an impressive manner.

Where: This can be used in the television.

**How:** Implementing the scoreboard using C language.

#### **High Level Requirements**

| ID    | Description                  | Status      |
|-------|------------------------------|-------------|
| HLR_1 | Get the players name         | Implemented |
| HLR_2 | Display the set score        | Implemented |
| HLR_3 | Diplay the current set score | Implemented |

**Low Level Requirements** 

| ID    | Description                                   | Status      |
|-------|---|-------------|
| HLR_1 | Players names are taken as string             | Implemented |
| HLR_2 | Set score is printed as integer               | Implemented |
| HLR_3 | HLR_3 Current set score is printed as integer |             |

Figure 3 Git Inspector Summary

## **Miniproject 2 – HeatControlSystem [Individual]**

#### **Modules**

- 1. C Programming
- 2. Embedded System
- 3. SimulIDE
- 4. Git

### Requirements

#### Introduction

The heat control system is used to control the temperature of the vehicle seat. When a person gets seated on a car, the button sensor will be activated. After that, the user gets access to turn ON the heater. The temperature sensor keeps monitoring the temperature and sends the analog value to the microcontroller. The microcontroller processes the analog input of the temperature sensor and outputs a temperature value through serial communication. All the activities of the control system are done on a Atmega328 microcontroller.

#### **Features**

The System is capable of telling whether a person is seated or not. A person once seated gets the access to turn ON the heater. The temperature sensor keeps monitoring the temperature and sends the analog value to the microcontroller.

#### Strength

Cost effective. Easily accessible. High efficiency.

#### Weakness

Overheating.

### **Opportunities**

This system can be expanded by adding few more features depending on the user requirement. Usage of different Microcontrollers and sensors.

#### **Threats**

Competition

#### 4W's and 1H's

#### What

Heat control system in a vehicle.

#### Where

Used in almost all of the passenger vehicles.

#### When

When temperature is low.

#### Who

To maintain body temperature of passengers.

#### How

By using sensors and microcontroller.

**High Level Requirements** 

| ID   | ID Description       |  |  |
|------|----------------------|--|--|
| HLR1 | Microcontroller unit |  |  |
| HLR2 | Switches             |  |  |
| HLR3 | Temperature sensor   |  |  |
| HLR4 | Heater               |  |  |
| HLR5 | Display CDD CRO      |  |  |

**Low Level Requirements** 

| ID   | Description            | HLR ID |
|------|------------------------|--------|
| LLR1 | ATMega328              | HLR1   |
| LLR2 | ADC and Potentiometer  | HLR3   |
| LLR3 | Thermo electric module | HLR4   |
| LLR4 | LCD and LED, PWM       | HLR5   |

### Git Dashboard

Figure 6 Git Dashboard

## Miniproject 3 – NFT Marketplace [Team]

#### **Modules**

- 1. SDLC
- 2. Git

### Requirements

#### 4W's and 1 H's

#### Why:

- 1. It can be used by anyone at any place.
- 2. Digital Items are the Future
- 3. Individual Creators can use this platform to sell the Digital products.

#### Where:

- 1. This can be used in our daily lives.
- 2. Can be used for international transactions

#### Who

- 1. It can be used by anyone.
- 2. It can be used as a reference for marketplace.

#### When:

- 1. One can buy, sell or create anytime.
- 2. The project can be used when anyone wants to buy an NFT.
- 3. Can be used without any centralised authority

#### How:

- 1. By using a crypto wallet anyone can Buy or Bid on NFT.
- 2. It will be helpful for Digital Creators.

#### **High Level Requirements**

| ID    | Description | Status      |
|-------|-------------|-------------|
| HLR_1 | Create NFT  | Implemented |
| HLR_2 | Sell NFT    | Implemented |
| HLR_3 | Bid NFT     | Implemented |
| HLR_4 | Buy NFT     | Implemented |
| HLR_5 | Contact     | Implemented |

### **Low Level Requirements**

| ID    | Description | Status      |
|-------|-------------|-------------|
| LLR_1 | Sign In     | Implemented |
| LLR_2 | Register    | Implemented |

| ID    | Description     | Status      |
|-------|-----------------|-------------|
| LLR_3 | Connect Wallet  | Implemented |
| LLR_4 | Activity        | Implemented |
| LLR_5 | Forgot password | Implemented |
| LLR_6 | Signup          | Implemented |

### **Individual Contribution and Highlights**

#### **Summary**

- 1. Designed Homepage
- 2. Search Option
- 3. Header
- 4. Footer
- 5. Integrating All Pages Together

### **Role in Project Team**

- 1. Designer: Designed Webpages Using HTML, CSS, JavaScript
- 2. Integrator: Integrated All the Pages Together
- 3. Tester: Testing the Webpage Performance and Bugs

# **Miniproject 4 – Attendance Automation [Team]**

### **Modules**

- 1. Python
- 2. Git

## Requirements

**High Level Requirements** 

| ID     | Feature                | Status          |
|--------|------------------------|-----------------|
| HLR_01 | GUI                    | Not Implemented |
| HLR_02 | Attendance Status      | Implemented     |
| HLR_03 | User Details           | Implemented     |
| HLR_04 | User load sheet        | Implemented     |
| HLR_05 | Output file generation | Implemented     |

## **Low Level Requirements**

| ID     | Feature  | High Level<br>ID | Status             |
|--------|--|------------------|--------------------|
| LLR_01 | GUI should allow user to enter inputs                            | HLR_01           | Not<br>Implemented |
| LLR_02 | Input Files For Different Sessions HLR                           |                  | Not<br>Implemented |
| LLR_03 | User can get the Attendance Status                               | HLR_02           | Implemented        |
| LLR_04 | User can enter status input to get the Attendance Status         | HLR_02           | Implemented        |
| LLR_05 | User can get the user details                                    | HLR_03           | Implemented        |
| LLR_06 | User will get the details after the successfull attendance entry | HLR_03           | Implemented        |
| LLR_07 | User can load different sheets                                   | HLR_04           | Implemented        |
| LLR_08 | User can also modify the existing sheets as it is dynamic        | HLR_04           | Implemented        |
| LLR_09 | Output file gets generated                                       | HLR_05           | Implemented        |
| LLR_10 | Multiple files can be generated with different inputs            | HLR_05           | Implemented        |

**Test Plan** 

## **High Level Test Plan**

| ID      | Description            | Expected I/P  | Expected O/P | Actual<br>O/P | Type Of<br>Test      |
|---------|------------------------|---------------|--------------|---------------|----------------------|
| HLTP_01 | Attendance<br>Status   | User<br>Input | SUCCESS      | SUCCESS       | Requirement<br>Based |
| HLTP_02 | User details           | User<br>Input | SUCCESS      | SUCCESS       | Requirement<br>Based |
| HLTP_03 | User load<br>sheet     | User<br>Input | SUCCESS      | SUCCESS       | Requirement<br>Based |

Figure 11 Git Inspector Summary

### **Individual Contribution and Highlights**

- 1. Improved implementation of Python Programming
- 2. Source code management using GitHub

### **Role in Project Team**

- 1. Programmer: Done Programming for Attendance Automation
- 2. Integrator: Integrated all the codes
- 3. Tester: Writing Testcases and testing the integrated code

## **Miniproject 5 – Landrover Project[Team]**

### **Modules**

- 1. Matlab
- 2. Git

## Requirements

We have implemented following features

- 1. Airbag Control System
- 2. Door Lock System
- 3. Anti-Lock Braking System
- 4. Power Side Mirror system
- 5. Wiper Control System
- 6. Adaptive Cruise Control System
- 7. Power Window

## **Design**

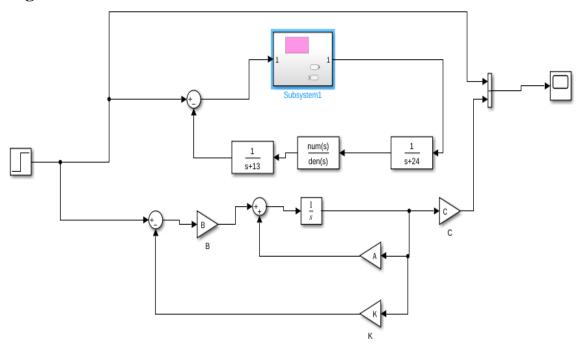

Figure 12 Structural Diagram

## **Miniproject 6 – Wiper Control[Team]**

#### **Modules**

- 1. C Programming
- 2. STM32

#### Requirements

#### **Features**

- 1. Low power Consumption
- 2. High performance
- 3. Real-time capabilities

#### 4W's and 1 H'S

#### Why

- 1. To understand basic concepts in STM32
- 2. To control wiper system by switching LED in STM32

#### Where

- 1. It can be used for many projects.
- 2. It has too many realistic features in this STM32 microcontroller

#### Who

- 1. It can be used by students.
- 2. It can be used by anyone who are new to embedded programming language.

#### When

It can be used for both small projects and end-to-end platforms.

#### How

- 1. By using softwares to exceute the program.
- 2. By loading the program in STM32

#### **SWOT Analysis**

#### **Strengths**

- 1. Simple program to understand.
- 2. Time effective.

#### Weakness

Single operating program is used here

#### **Opportunities**

Program can be made more complex by adding more components.

### **Threats**

There are advanced programs which are simple to learn is out already.

## **High Level Requirements**

| ID  | Description     | Status      |  |
|-----|-----------------|-------------|--|
| HR1 | Microcontroller | Implemented |  |
| HR2 | Switch          | Implemented |  |
| HR3 | Four LED        | Implemented |  |
| HR4 | Software        | Implemented |  |

## **Low Level Requirements**

| ID   | Description | Status      |
|------|-------------|-------------|
| LLR1 | STM32       | Implemented |
| LLR2 | Switch      | Implemented |
| LLR3 | LED         | Implemented |

## Design

### **Test Plan**

## **High Level Test Plan**

| ID     | Description  | Output                     | Type of Test         |
|--------|--|----------------------------|----------------------|
| HLTP_1 | Press and hold the button to put the Ignition key position in ACC mode | System Enters<br>ACC State | Requirement<br>Based |
| HLTP_2 | Different wiper frequencies to be set (1Hz, 4Hz & 8Hz)                 | Responds Based on Input    | Requirement<br>Based |
| HLTP_3 | Hold the button to put the system in Idle state                        | Enters Idle<br>State       | Requirement<br>Based |

#### **Low Level Test Plan**

| ID     | Description  | Output                       | HLTP ID           | Type of Test         |
|--------|--|------------------------------|-------------------|----------------------|
| LLTP_1 | Hold the button for 2 sec<br>to bring the ignition key<br>position at ACC mode | Red LED-<br>ON               | HLTP_1            | Requirement<br>Based |
| LLTP_2 | Hold the button for 2 sec to go back to the Idle state                         | Red LED-<br>OFF              | HLTP_1,<br>HLTP_3 | Requirement<br>Based |
| LLTP_3 | Press the button one time to set frequency to 1Hz                              | Blue LED-<br>ON              | HLTP_2            | Requirement<br>Based |
| LLTP_4 | Press the button second time to set frequency to 4Hz                           | Green<br>LED-ON              | HLTP_2            | Requirement<br>Based |
| LLTP_5 | Press the button third time to set frequency to 8Hz                            | Orange<br>LED-ON             | HLTP_2            | Requirement<br>Based |
| LLTP_6 | Press the button fourth time to turn OFF the wiper action                      | All LED<br>OFF except<br>Red | HLTP_2            | Requirement<br>Based |
| LLTP_7 | Hold the button for 2 sec<br>to bring ignition key<br>position at Lock state   | Red LED-<br>OFF              | HLTP_3            | Requirement<br>Based |

## **Implementation and Summary**

#### Git Link:

Link: <a href="https://github.com/GENESIS-2022/MasteringMCU-Team32">https://github.com/GENESIS-2022/MasteringMCU-Team32</a>

### **Individual Contribution and Highlights**

- 1. Wiper System using C Programming
- 2. Source code management using GitHub

### Role in Project Team

- 1. Programmer: Done Programming for Wiper System
- 2. Integrator: Integrated all the codes
- 3. Tester: Writing Testcases and testing the integrated code

## **Miniproject 7 – Jaguar Project[Team]**

### **Modules**

- 1. Automotive Systems
- 2. Git

## Requirements

In this Jaguar project we have taken following features and I have contributed to Parking System Feature

- 1. Parking System
- 2. Headlight Control
- 3. Sideview Mirror Control
- 4. Wiper Control System

| S.NO | Function  | Description   |
|------|---|---|
| 1    | Rain sensor                                     | The IR sensor in the front windscreen sends the signal and if it is reflected by the rain drop then front and rear wipers are turned ON. The wipers speed are in accordance with the car speed. |
| 2    | Single wipe                                     | The wiper is turned ON once and set back to its initial position. If it is held then it wipes until its held.   |
| 3    | Manual speed<br>modes                           | Low and High speed modes are chosen according to the users by rotating the switching so that the gap between each wipes varies.   |
| 4    | Wash and wipe                                   | When this mode is turned ON, the washing liquid is sprayed and wiper runs continuously until its held ON.   |
| 5    | Rear windscreen<br>wipe with car<br>speed       | When switched ON to INT mode the frequency of the rear wiper depends on the car's speed.  |
| 6    | Rear windscreen<br>continuous<br>automatic wipe | If rear side switch is turned to ON state so its wipes continuously until this mode is switched OFF.  |
| 7    | User based control                              | If this mode is turned ON, it wipes the rear windscreen only when this mode is held.  |

## **Design**

## **Implementation and Summary**

#### Git Link:

Link: <a href="https://github.com/alrichroshan/Team\_Jaguar-XF">https://github.com/alrichroshan/Team\_Jaguar-XF</a>

### **Individual Contribution and Highlights**

- 1. Wiper Control System Case Study
- 2. Source code management using GitHub

### **Role in Project Team**

- 1. Designer: Done Designing for Project
- 2. Researcher: Done case study for Wiper Control System

## Miniproject 8 – EV Bike [Team]

#### **Modules**

- 1. Matlab
- 2. Matlab Script

### **Requirements**

#### **Motor Performance:**

- 1. Our Arrow M1 has a Mid Drive IPM motor which can produce 7.2 kW power and 40 Nm torque. We find these figures to be a nice balance of drivability and efficiency.
- 2. Arrow M1 has an acceleration time from 0 to 60 km/hr of 6.5 seconds.
- 3. Top speed of our Arrow M1 is 100 km/hr

#### **Battery Performance:**

- 1. We are using a Lithium polymer battery to reduce weight and thereby increase fuel efficiency, performance and handling.
- 2. A range of 220 km is class leading due to our battery being the biggest at 4.6 kWh.
- 3. Charging times of our Arrow M1 is higher than the competition at 7.15 hours but we make up for it in the range section.
- 4. We also offer fast charging.

#### **Braking Performance:**

- 1. Our Arrow M1 also uses combi braking system and use disc brakes for both front and back wheels.
- 2. Braking performance is on par with the competition.

#### **Wheel Performance:**

- 1. Our Arrow M1 uses Alloy wheels at 12 inches diameter.
- 2. We use a 90 section, 90 profile tire for a balance between grip, efficiency and ride quality.

#### **Suspension Performance:**

1. We use Mono shocks for rear and single fork for front.

#### **Dimensions:**

- 1. Our kerb weight is 110 kg which is just 2 kg heavier than the Ather 450X while having a substantially bigger battery and more powerful motor.
- 2. Length, Height and Weight are all comparable to the competition.
- 3. Wheelbase is 1370 mm is the longest in the segment.
- 4. With a seat height of 782 mm it is accessible for a wide range of people in terms of height.

### **Implementation and Summary**

Submission: Submitted in GEALearn

### **Individual Contribution and Highlights**

1. Done in Matlab Script

### **Role in Project Team**

- 1. Done Matlab scripting for EV Bike
- 2. Researcher: Done case study for EV Bike

# **Miniproject 9 – Wiper Control System[Individual]**

## Modules

- 1. Autosar
- 2. Git

## Requirements

| S.NO | Function                                  | Description   |
|------|---|---|
| 1    | Rain sensor                               | The IR sensor in the front windscreen sends the signal and if it is reflected by the rain drop then front and rear wipers are turned ON. The wipers speed are in accordance with the car speed. |
